Operation

Measuring Conditions

Range

Range is limited to 60 m (200 ft.).

At night or dusk and if the target is in shadow the measuring range without target plate is increased. Use a target plate to increase the measurement range during daylight, or if the target has poor reflection properties!

Target Surfaces

CAUTION:

Measuring errors can occur when measuring toward colourless liquids (e.g. water) or dust free glass, Styrofoam or similar semi-permeable surfaces. Aiming at high gloss surfaces may deflect the laser-beam and lead to measurement errors.

Hazards of Use

CAUTION:

Watch out for erroneous distance measurements if the instrument is defective or if it has been dropped or has been misused or modified.

Precautions:

Carry out periodic test measurements. Particularly after the instrument has been subject to

abnormal use, and before, during and after important measurements.

Make sure the window on the front (see drawing {K}) is kept clean and that there is no mechanical damage to the bumpers.

CAUTION:

In using the instrument for distance measurements or for positioning moving objects (e.g. cranes, building equipment, platforms, etc.) unforeseen events may cause erroneous measurements.

Precautions:

Only use this product as a measuring sensor, not as a control device. Your system must be configured and operated in such a way, that in case of an erroneous measurement, malfunction of the device or power failure due to installed safety measures (e.g. safety limit switch), it is assured that no damage will occur.

Switching on/off

1x briefly: the instrument and the laser are switched on.

The display shows the battery symbol  until the next button is pressed.

Pressing this button for longer switches the instrument off.

The instrument switches off automatically after three minutes of inactivity.

Setting the instrument

Press long until the desired unit is displayed.

Possible units:

	Distance	Area	Volume
1.	0.000 m	0.000 m ²	0.000 m ³
2.	0'0" ¹ / ₁₆	0.00 ft ²	0.0 ft ³
3.	0 in ¹ / ₁₆	0.00 ft ²	0.0 ft ³
4.	0.00 ft	0.00 ft ²	0.0 ft ³

CLEAR-Key

1x briefly: the last action is cancelled.

Illumination

The illumination switches on after pressing any button. The illumination automatically switches off 20 seconds after the last button actuation.

Reference Setting

Default reference setting is from the rear of the instrument.

The instrument can be set for the following measurements:

- To measure from an edge (see drawing {D}), fold out the stop bracket until it snaps in for the first time. See drawing {E}.
- To measure out of a corner (see drawing {D}), fold out the stop bracket until it snaps in, push the stop bracket with a little force to the right side; the stop bracket can now be completely unfolded. See drawing {E}.

CAUTION:

Make sure that when measuring from the unfolded endpiece, the measuring reference is set to "End piece"!

1x briefly: the next measurement is taken from the front edge.

2x briefly: the measurement is taken from the unfolded end piece.

After one measurement, the reference returns automatically to the default setting (rear reference).

1x long: the measurements are taken with the front as reference until a new measuring reference is set

2x long: the measurements are taken from the unfolded end piece until a new measuring reference is set.

See drawing {F}.

Measuring

Single Distance Measurement

1x briefly: the laser is activated.

1x briefly: a distance measurement is taken.

The result is displayed immediately.

Continuous measurement

Distances can be measured with this function

1x long: a "beep" is sounded. A continuous measurement is started.

1x briefly: the continuous measurement is stopped.

The last measured value is displayed in the summary line.

Minimum-/Maximum-Measuring

This function enables determining the minimum or maximum distance from a specific measuring point, e.g. the determination of room diagonals (maximum value) or horizontal distance (minimum value).

Turn on continuous measurement (see above).

The corresponding maximum and minimum values are displayed.

Addition / Subtraction

Distance Measurement.

+ 1x briefly: the next measurement is added to the previous one.

- 1x briefly: the next measurement is subtracted from the previous one.

Repeat this procedure for as many times as required. The result is displayed in the summary row, the previously measured value is displayed in intermediate line 2, the value to be added in intermediate line 1.

CLEAR OFF 1x briefly: the last step is cancelled.

Area function

FUNC 1x briefly: The  symbol is displayed.

↑ON 1x briefly: takes first distance measurement (e.g. length)

↑ON 1x briefly: takes second distance measurement (e.g. width)

The result of the area measurement is displayed in the summary row, the individually measured values are displayed in intermediate lines 1 and 2.

Adding and subtracting areas

Calling up the area function and measuring areas.

Press **+** or **-**.

↑ON 1x briefly: takes first distance measurement (e.g. length)

↑ON 1x briefly: takes second distance measurement (e.g. width)

The result of the second area measurement, "+" flashes.

↑ON 1x briefly: confirms the addition; the added area results are displayed in the summary row.

Volume function

FUNC 2x briefly: the  symbol is displayed.

↑ON 1x briefly: takes first distance measurement (e.g. length)

↑ON 1x briefly: takes second distance measurement (e.g. width)

The result of the area measurement from the values already measured is displayed in the summary row.

↑ON 1x briefly: takes the third distance measurement (e.g. height). The value is displayed in intermediate line 1.

The result of the area measurement is displayed in the summary row, the two previously measured values in intermediate lines 1 and 2.

Indirect Measurement

The instrument can measure distances with the Pythagorean method. This procedure facilitates in measuring distances that are difficult to access.

 Adhere to the prescribed sequence of measurements:

- All target points must be vertical or horizontal on the surface of the wall.
- The best results are achieved when the instrument is rotated around a fixed point (e.g. the stop bracket is fully extended and the instrument is placed against a wall).
- To take the measurement, the minimum/maximum function can be called up. The minimum value is used for measurements that must be at right-angles to the target; the maximum distance is used for all other measurements.

 Make sure that the first measurement and the distance to be measured are at right angles. Use the minimum/maximum function.

Indirect measurement - determining a distance using 2 auxilliary measurements

See drawing {G}

 3x briefly: the  symbol is displayed.

The distance to be measured flashes in the symbol.

 1x briefly: takes a measurement of the distance

The second distance to be measured flashes in the symbol.

 1x briefly: takes a measurement of the horizontal distance

The result of the function is displayed in the summary row.

If the  button is pressed for along time while measuring a distance, maximum or minimum continuous measuring is activated.

Indirect measurement - determining a distance using 3 auxilliary measurements

See drawing {H}

 4x briefly: the  symbol is displayed.

The distance to be measured flashes in the symbol.

 1x briefly: takes a distance measurement

The second distance to be measured flashes in the symbol

 1x briefly: takes a horizontal measurement.

The third distance to be measured flashes in the symbol

 1x briefly: takes a measurement of the distance

The result of the function is displayed in the summary row.

If the  button is pressed for along time while measuring a distance, maximum or minimum continuous measuring is activated.

Stake out function

This function is helpful when staking out equal distances, e.g in the erection of wooden substructures. See drawing {I}

 5x briefly: the $-| -| -|$ symbol is displayed.

A value is displayed in the summary row (default value 1.000 m or 39 3/8"). This value can be adjusted to the desired stake out distance.

 The value is increased.

 The value is reduced.

Holding the button down accelerates the speed at which the value changes.

 1x briefly: starts continuous measurement.

In intermediate line 1, the set distance or the next appropriate multiple thereof is displayed.

In the summary row, the distance to the next appropriate stake out point is displayed.

When approaching a stakeout point (and you're closer than 0.10 m or 4"), the instrument starts to beep. When the point is reached, the beep sound changes and intermediate line 1 starts to flash.

 1x briefly: distance measurement is interrupted and the instrument switches back to individual distance measuring mode.

Timer (self-triggering)

 1x long: The  symbol is displayed.

The timer is preset to 5 seconds.

 The value is increased.

 The value is reduced.

Holding the buttons down increases the rate of change of the values.

The countdown starts automatically (if the laser is activated) and then triggers the measurement.

Switching off the beep

  Press and hold simultaneously for 5 seconds:

The beep is switched off.

To reactivate it, press and hold for 5 seconds.
